Lab 1 - OpenMP

Nguyen Duc Tung

How to use OpenMP?

I added `#pragma omp parallel for` before the `for` loop for the "automagically" to happen.

How is the speedup?

Following is the result:

```
1  labwork 1 CPU ellapsed 2954.7ms
2  labwork 1 OpenMP ellapsed 712.3ms
```

The time is about 4 time faster, most likely it's paralelly executed on 4 threads.
